

SlotMachine

# SlotMachine – Objectives

## A Marketplace for more cost-efficient flight prioritization

- Develop a cost-efficient solution, enabled by Multi-Party Computation (MPC) and blockchain technology, which will extend the existing slot swapping capabilities between different airlines.
- Research and develop a secure and trustworthy system which employs an evolutionary algorithm in conjunction with the PrivacyEngine in a privacy-preserving way.
- Built with a privacy-first approach, the goal is to protect sensitive airline data from competitors and airport operators and therefore fully unleash the potential of slot swapping.

# SlotMachine – Overview
