

From Takeoff to Machine Learning

On how aircraft flight data is recorded, protected and how to make it actionable for machine learning.

Florian Schwaiger (f.schwaiger@tum.de)

Research Assistant and PhD Candidate

(until 2019)

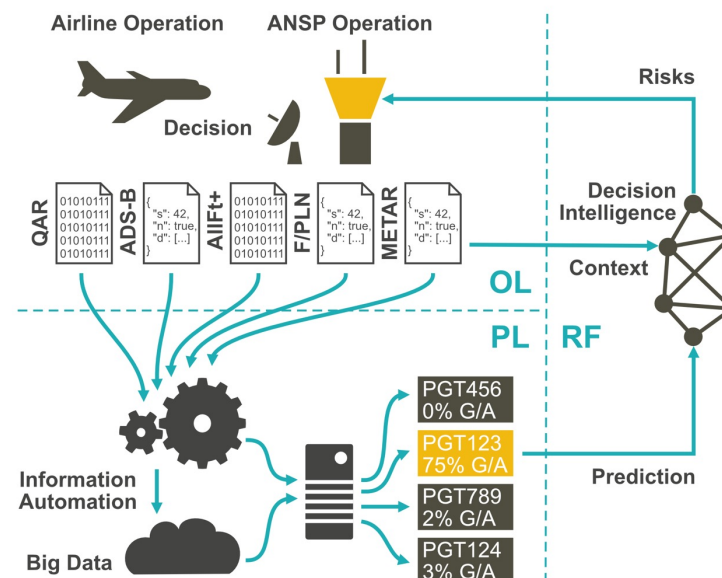

Safety Analysis on Merged Data:

- FDM Dataset Preparation
- Analysis Tools for UA and CFIT

From Prediction to Decision:

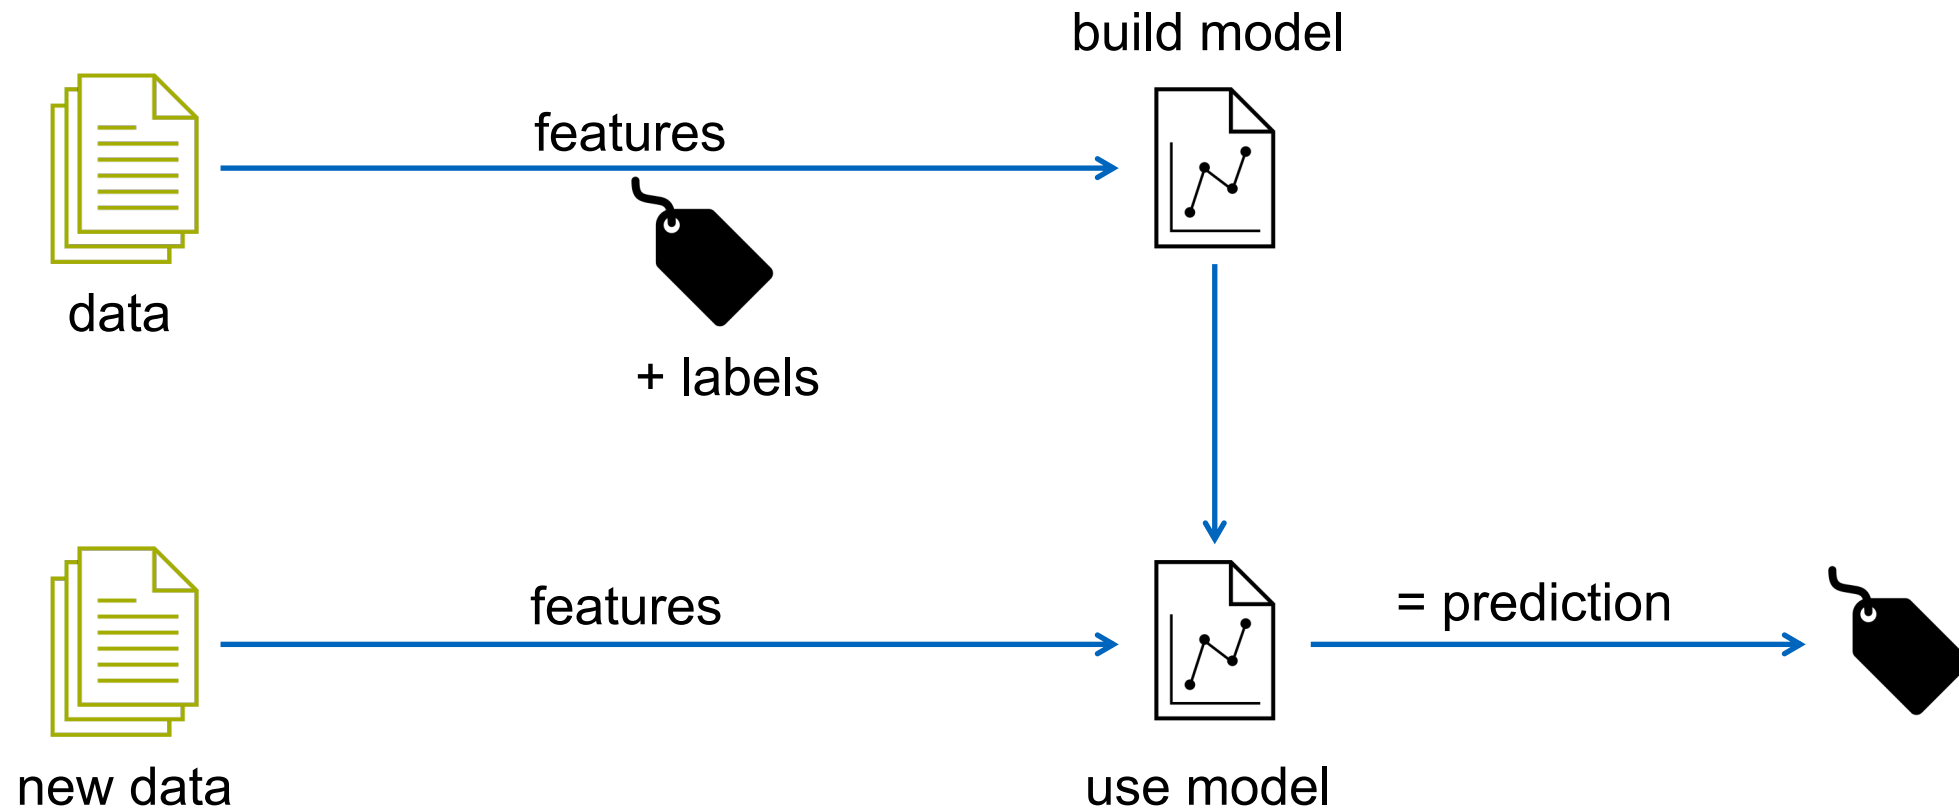

- Unstable Approach Prediction
- Decision Support for ANSP

Advanced Multivariate Statistics:

- Mathematical Statistics
 - Copula / Vine Copulas
 - Copula State Space Models
- Flight Safety Applications
 - Predictive Analysis
 - Data Reconstruction

Machine Learning needs data, but where does it come from?

Quick Access Recorder

file format: ARINC717, ARINC767, SAR

100 – 1000 parameters

avionics, cabin, engines, HMI, FMS, ...

1/64 Hz – 16 Hz varying sampling rates

data about performance of aircraft and pilots

on HDD

on optical disc

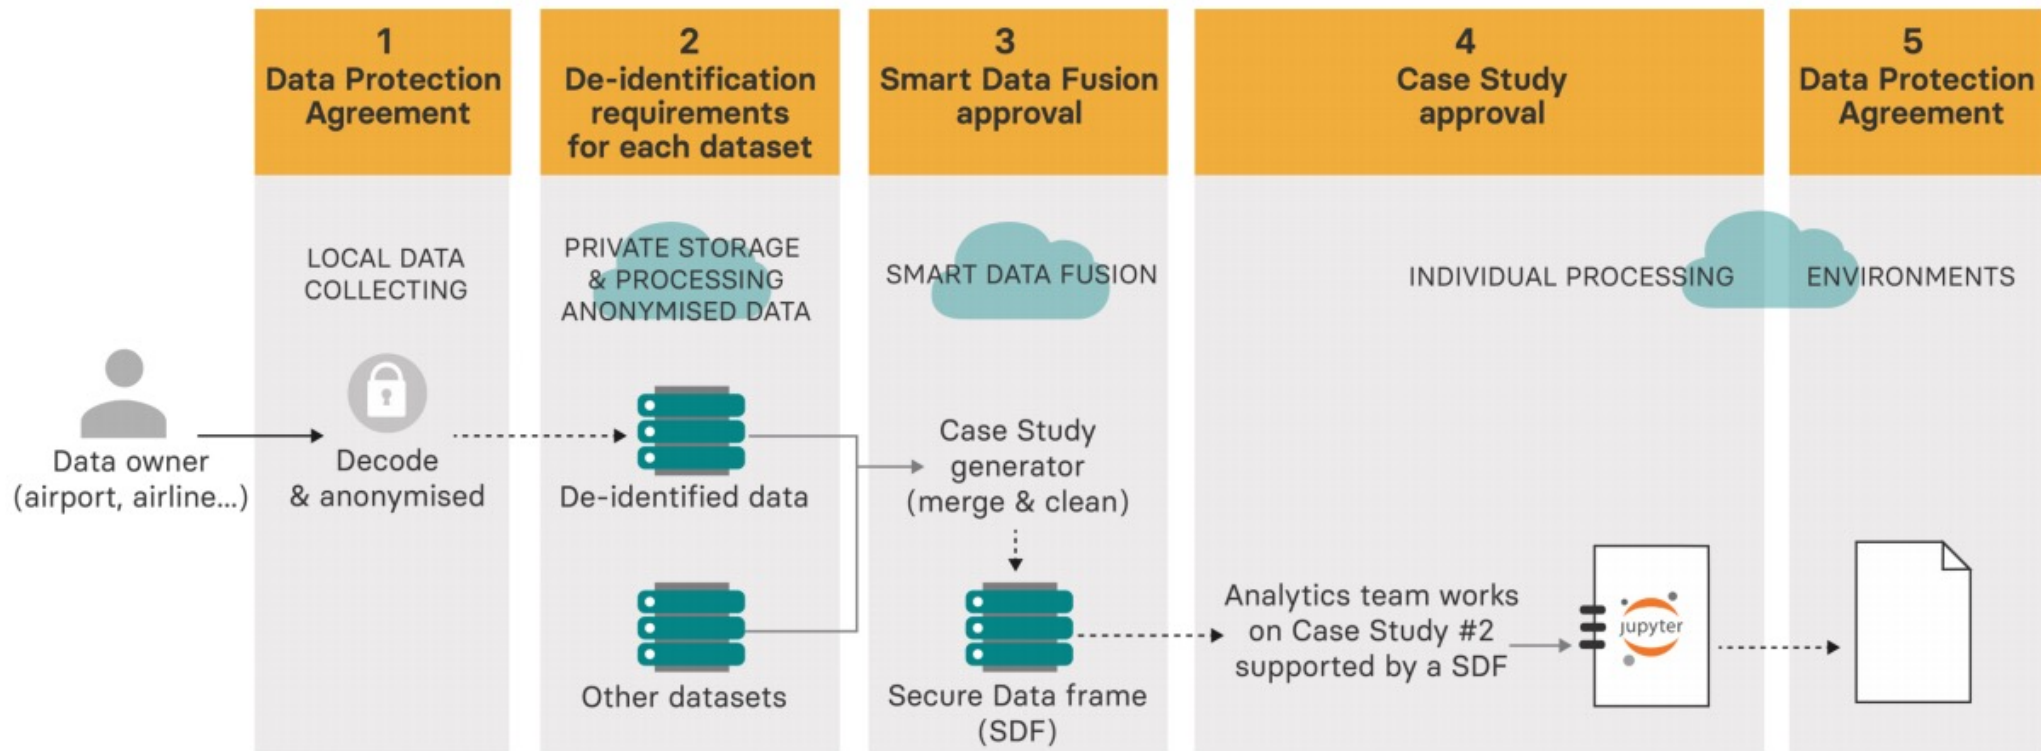

on SD card

wireless upload

Quick insight: the data protection agreements from SafeClouds.eu (2019)

source: Innaxis

Data has many errors – our goal is to repair as much as possible

outliers

partially defined

missing

wrapped around

missing sign bit

partially corrupt

Some more examples what to expect from QAR data

- missing letters in destination airport ICAO code from FMS Screen

(_____, EDDM, EDD_)

- air / ground switches wrong

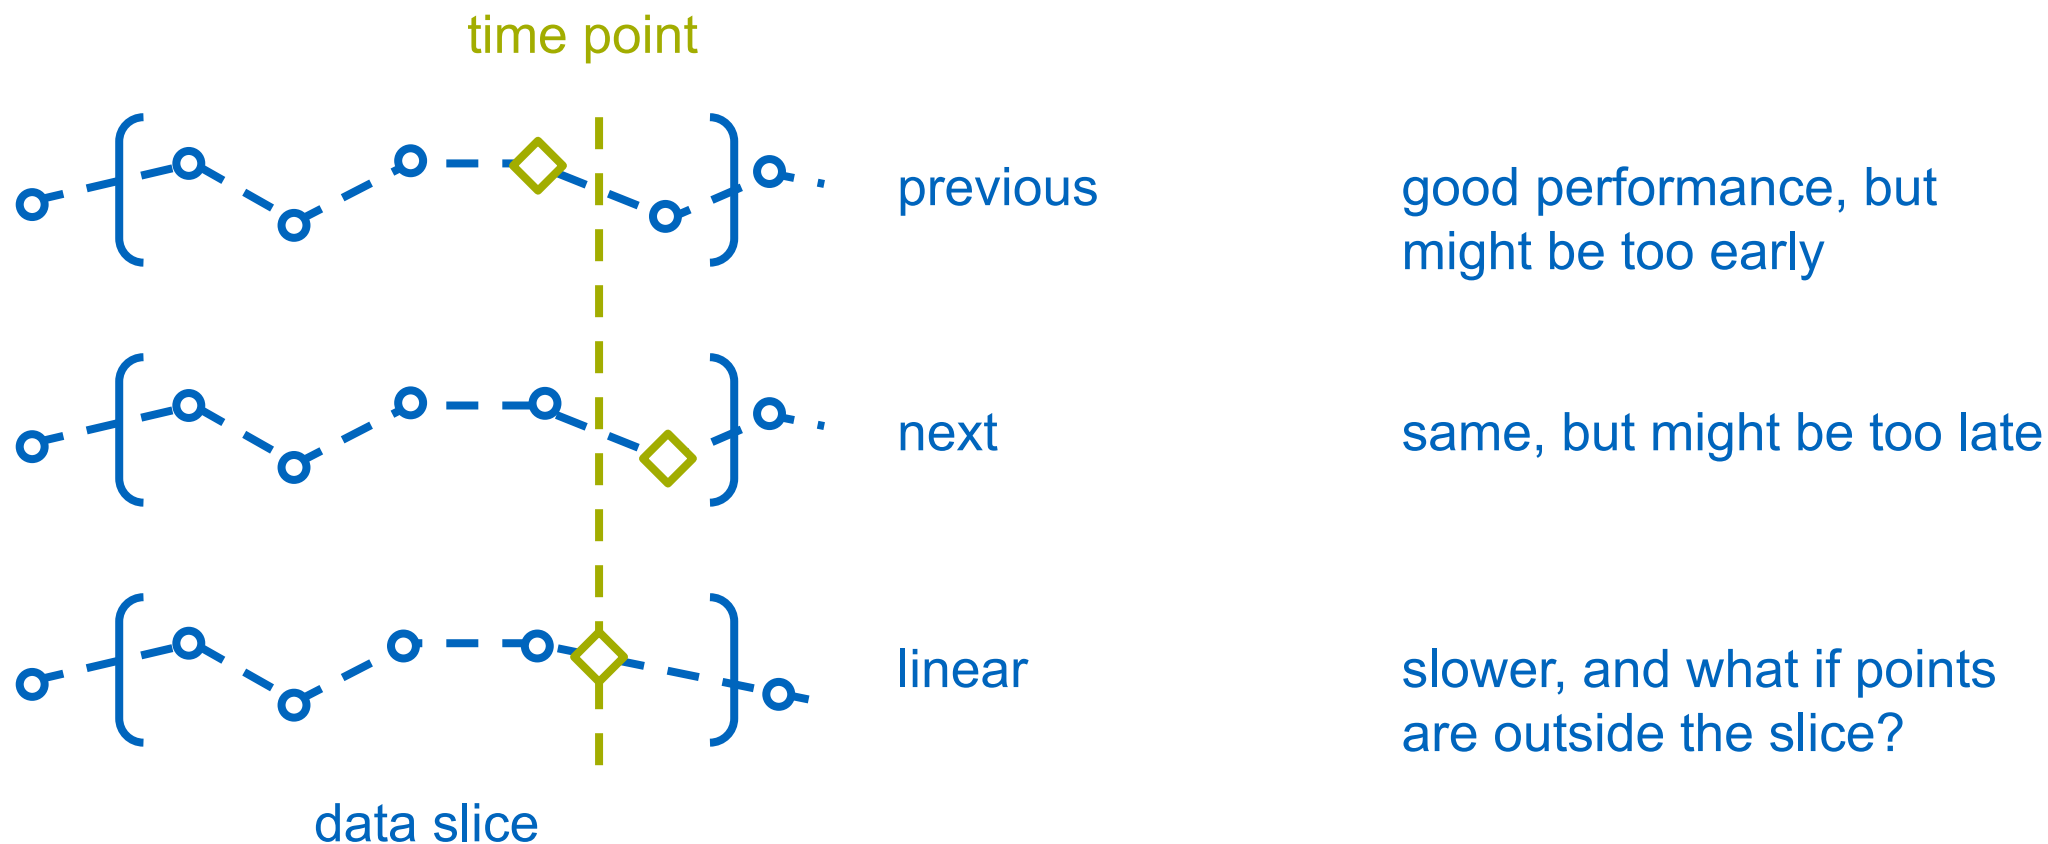

(AIR, GND, GND, GND)

- negative radio altitudes

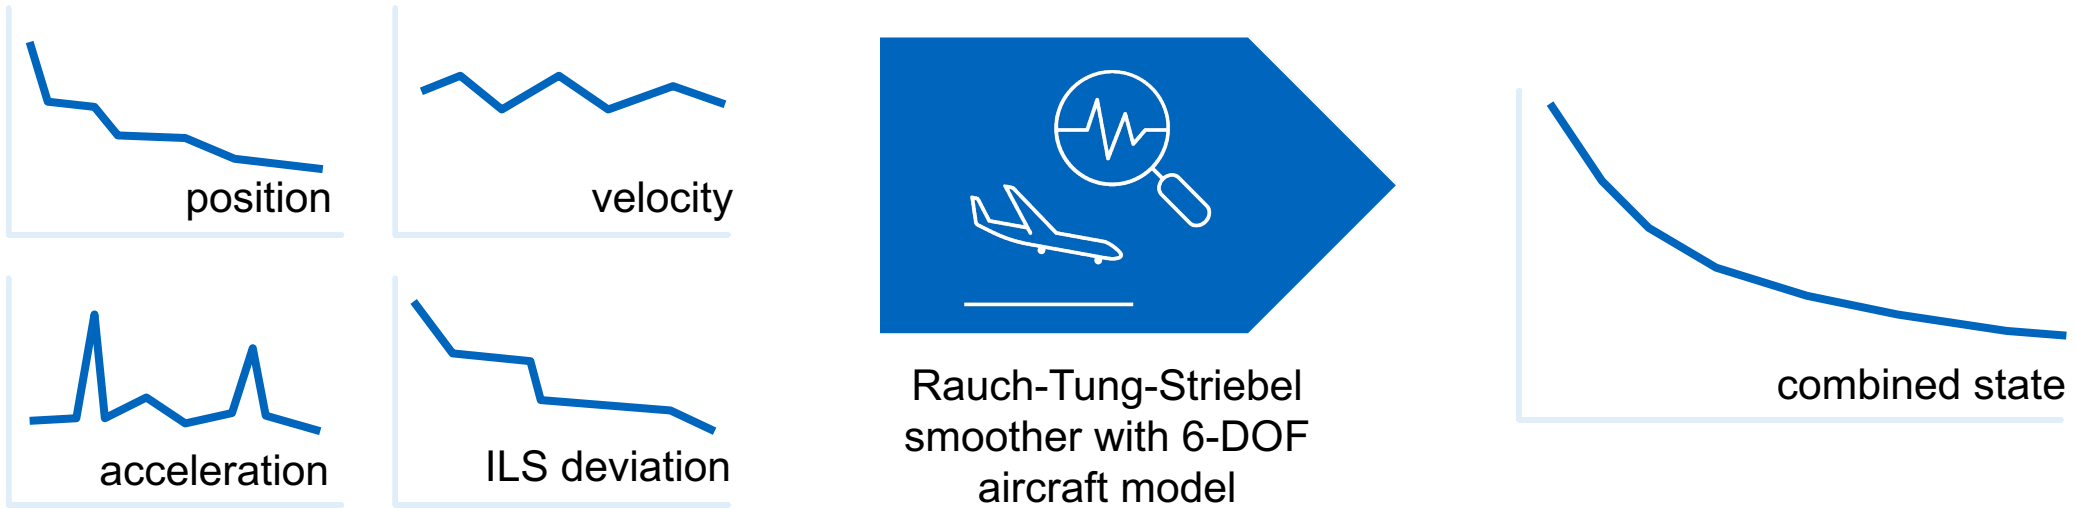

(-1, -3, 10, 500, 4096, 700, 400, 10, -5)

How to measure signals at time points?

ARINC717: data points can be up to 64 seconds apart, or more if points are missing

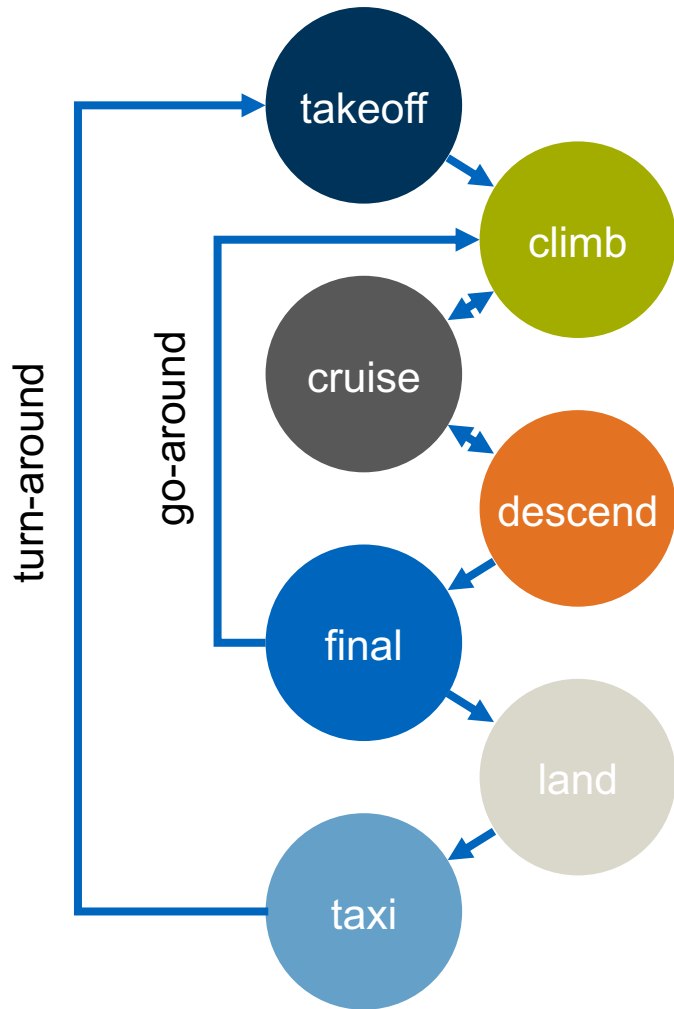

Full trajectory reconstruction for touchdown / landing measurements

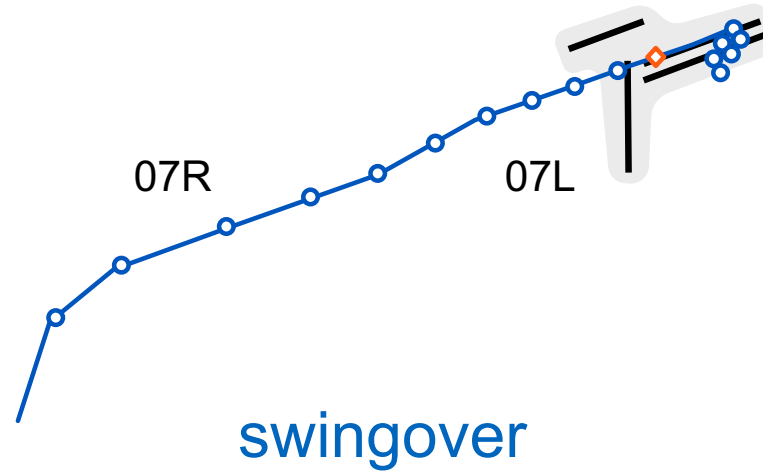

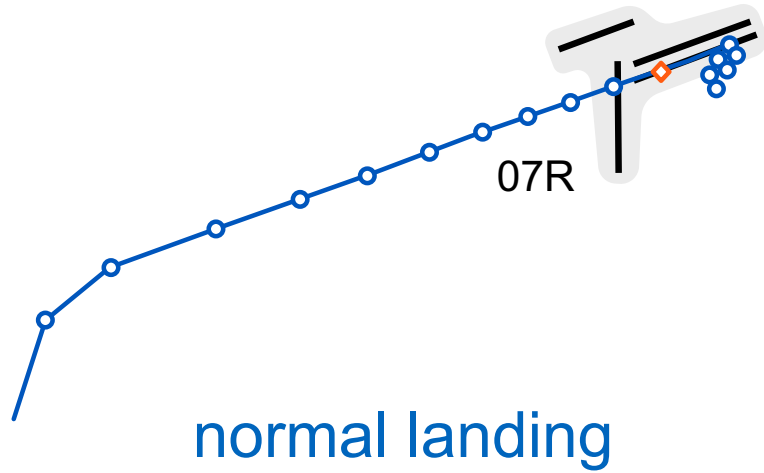

L. Höhdorf, J. Siegel, J. Sembiring, P. Koppitz, and F. Holzapfel, "Reconstruction of Aircraft Trajectories during Landing using a Rauch-Tung-Striebel Smoother, Instrument Landing System Deviation Information, and Taxiway Locations," in *AIAA Atmospheric Flight Mechanics Conference*, Washington, D.C., 2016.

Detect flight phases and events with a state machine

Detect the runway the aircraft lands on – easy in theory only

Merge spatio-temporal weather data with deidentified flights

QAR

METAR

#	DATE	TIME	AIRPORT	CALLSIGN	...
1000	7s53jw9s	10:20:42	EDDM	a8a5as1g	...
1016	7s53jw9s	10:20:43	EDDM	a8a5as1g	...

Thank you for listening!

I'll see you in the Q&A

And a special thanks to my colleagues
for assisting me with this talk.
